## SNA 2008 & BPM 6& ESA 2010 & MFSM 2016

- ✓ definitions
- ✓ residency
- ✓ sectoral classification
- ✓ instruments
- ✓ calculations

## Handbook on Securities Statistics

- ✓ ownership
- ✓ market value
- ✓ transaction

2

# Main Features of Securities

Securities include:

- **debt securities:** *negotiable* financial instruments serving as evidence of a debt (2008 SNA, paragraph 11.64).
- **equity securities:** securities acknowledging claims on the residual value of a corporation after the claims of all creditors have been met (2008 SNA, paragraph 11.83).
- **investment fund shares or units** (to some extent): issued by investment funds (collective investment undertakings through which investors pool funds for investment in financial and nonfinancial assets) (2008 SNA, paragraph 11.94).

# Residency

- Residency is based on the criteria of economic border and center of economic interest.
- Individuals and institutions that permanently reside in an economy for longer than one year and engage in economic activities in that economy are accepted as "residents".

- foreign banks' branches in Türkiye are considered as residents
- domestic banks' branches abroad are considered as nonresidents

# Ownership

International standards recommend that securities statistics are compiled based on economic ownership

- **HSS paragraph 3.40** *Economic ownership of the securities provided as collateral under such agreements is considered not to have been transferred because the cash recipient (the seller of the securities) remains subject to all market risks and continues to receive any benefits.* Therefore, transactions involving securities repurchase agreements and securities lending do not entail a new issuance of debt securities, but rather the incurrence of collateralized loans. **These transactions are therefore excluded from debt securities statistics.**
- **BPM 6 paragraph 5.54** *The securities provided as collateral under securities lending, including a securities repurchase agreement, are treated as not having changed economic ownership, as discussed in paragraph 7.58. This treatment is adopted because the cash receiver is still subject to the risks or rewards of any change in the price of the security.*

1. Economic owner of a security is the party which is subject to the risks or rewards of any change in the price of the security.
2. The legal owner of a security can sell it or use it in repo/collateral/lending transactions.
3. These type of transactions in which economic ownership does not change should be excluded from securities statistics

# Valuation of Debt Securities

Market prices are the basic reference for valuation

HSS recommends that

- Debt securities issues should be recorded **at both nominal and market value**,
- Debt securities holdings should be recorded **at market value**

# Price

Price data need to be estimated when there is no market price for the reference date

## ■ Debt Securities

- **Domestic debt securities issued by General Government:** Markets Department calculates daily price data for each bond.
- **Domestic debt securities issued by other sectors:** Data sources are Central Registry Agency and Stock Exchange.

When there is no price available for reference date (t), price is defined as follows:

$$Price_t = \begin{cases} Price_{t-1} & \text{if price is available for } t - 1 \\ 100 & \text{otherwise} \end{cases}$$

- **Debt securities issued in international markets:** Primary data sources are commercial databases.

When there is no price available for reference date, price is defined as follows:

$$Price_t = \begin{cases} Price_{t-n} \text{ or } Price_{t+n} & \text{if price is available for } n \leq 5 \\ 100 & \text{otherwise} \end{cases}$$

## ■ Listed Shares

Data source: Stock Exchange

When there is no price available for reference date (t), last trading day's price is used.

$$Price_t = Price_n$$

for n being the last trading day for that share

# Market Value

For the calculation of market value, we use end of period price

- The market value is calculated using the following formula:

$$\text{Market Value}_t = \sum_i (\text{Face Value}_t^i \times \text{Price}_t^i)$$

where:

$\text{Market Value}_t$  = total market value at period  $t$

$\text{Face Value}_t^i$  = face value of security  $i$  at period  $t$

$\text{Price}_t^i$  = market price of security  $i$  at period  $t$ ,

# Transactions

Transactions refers to net issuance (i.e., issuance minus redemptions) or net acquisitions (i.e., gross acquisitions minus disposals) of securities during accounting period t. (HSS paragraph 5.15 )

Transactions are calculated by taking difference of stocks and using average prices and exchange rate

## 1. Debt Securities

$$\text{Net transactions}_t^{USD} = \sum_i \left\{ (\text{Face Value}_t^i - \text{Face Value}_{t-1}^i) \times \text{Average}(\text{Price}_t^i, \text{Price}_{t-1}^i) \div \left( \left( \sum_{p=0}^{n-1} \text{Exchange Rate}_{t-p} \right) \times (1 \div n) \right) \right\}$$

where;  $\text{Face Value}_t^i$  and  $\text{Price}_t^i$  refer to the face value and market price of security i at time t, respectively.

## 2. Shares

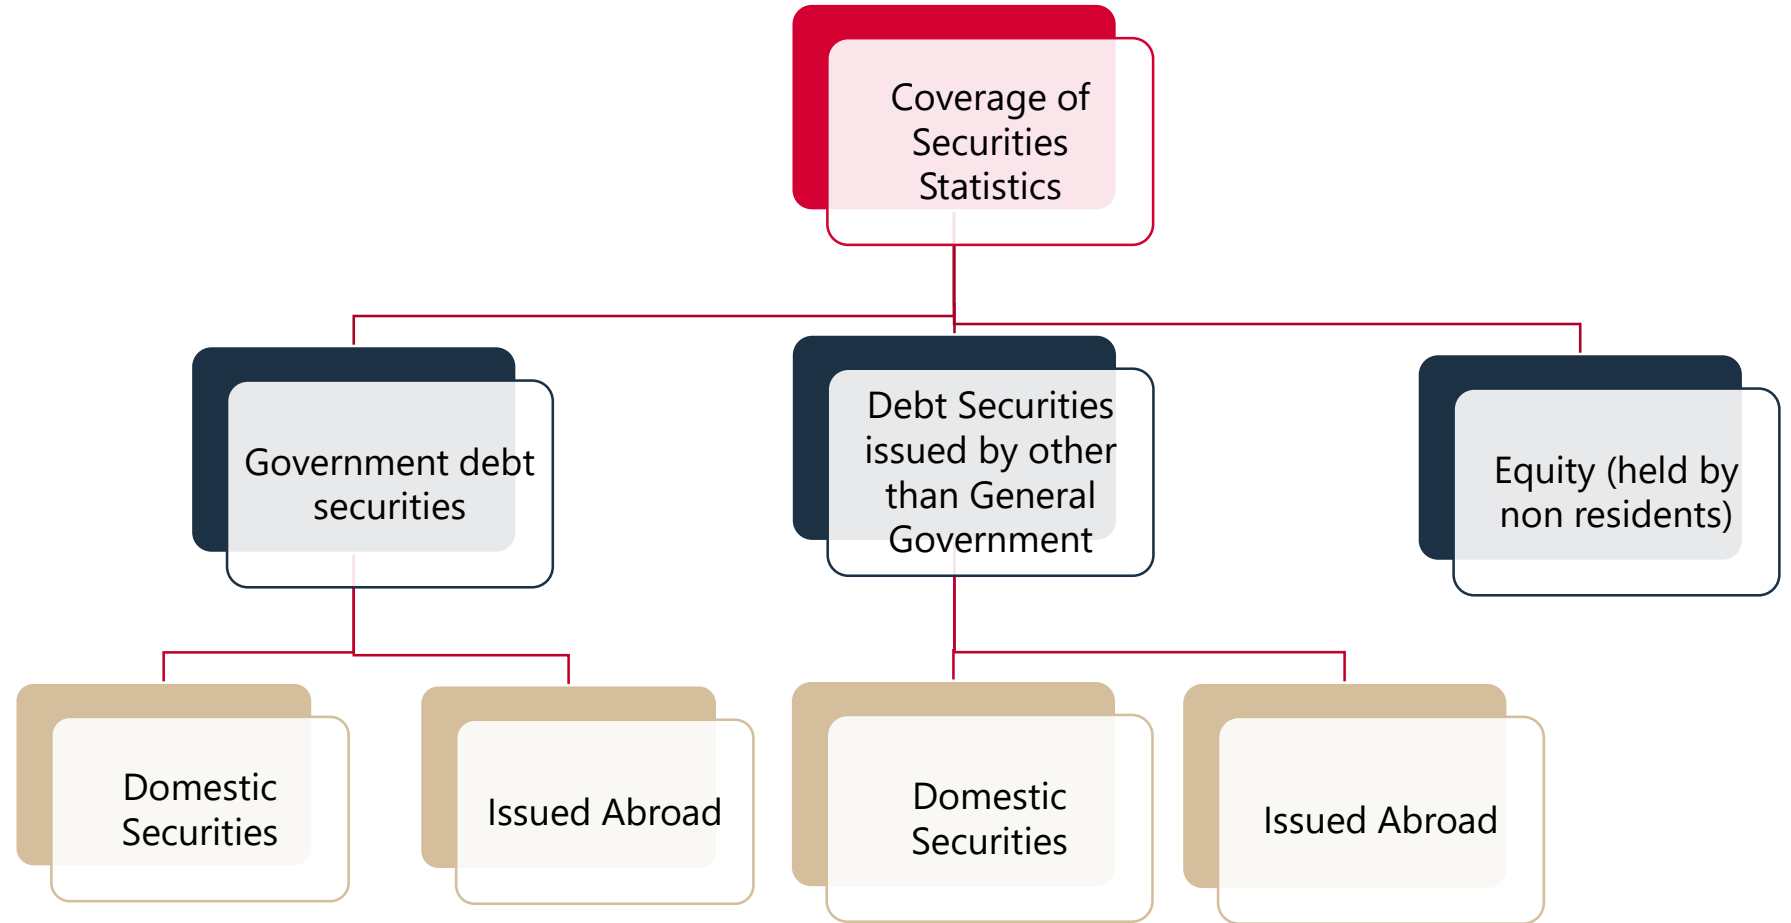

$$\text{Net transactions}_t^{USD} = \sum_i \sum_{p=0}^{n-1} \{ (\text{Face Value}_{t-p}^i - \text{Face Value}_{t-p-1}^i) \times \text{Price}_{t-p-2}^i \div \text{Exchange Rate}_{t-p-2} \}$$

where; i refers to shares, n refers to the number of business days in the relevant week, t refers to the last business day of the week,  $t - p$  refers to p day prior to the last business day, and  $\text{Exchange Rate}_{t-p}$  refers to the indicative USD buying rate announced by the CBRT for p day prior to the last business day of the week.

# Holding Statistics

4 different tables according to issuer sectors and market

**Objective 1.**

Minimizing reporting errors and preventing double counts

**Objective 2.**

Minimizing differences between total issuance and total amount of holders

# Holding Statistics

Data Sources

## ■ Government Domestic Debt Securities

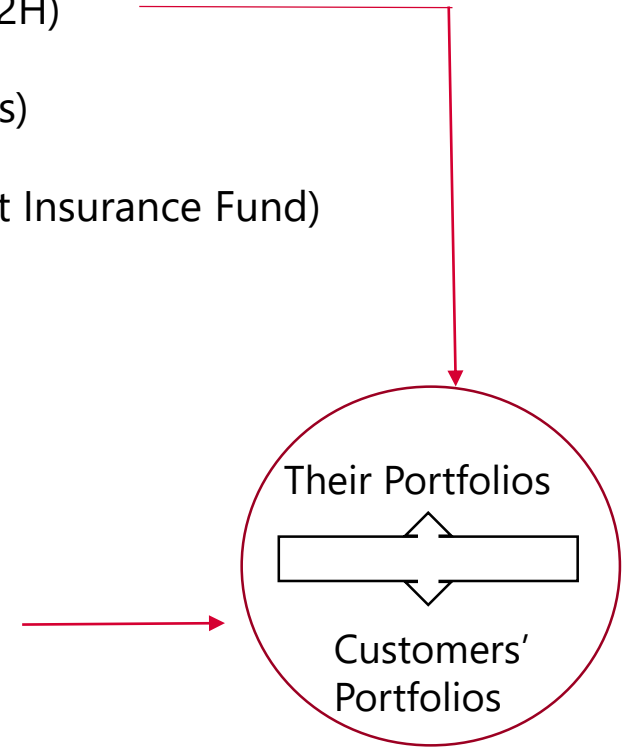

- Resident Custodian Banks and Brokerage Houses (MD302H)
- Istanbul Settlement and Custody Bank –Takasbank (Funds)
- CBRT Branches (Foundation of CBRT Staff, Saving Deposit Insurance Fund)
- MKK (Euroclear)
- Unemployment Insurance Fund (UIF)

## ■ Debt Securities Issued Abroad

- Resident Custodian Banks and Brokerage Houses (MD302H)
- Takasbank (Funds)
- Central Registry Agency (MKK)

## ■ Domestic Debt Securities Issued by Other Than General Government

- Central Registry Agency (MKK)

# Reporting Schemes

Reporting forms are re-designed to fulfill international standards

- The reporting institutions report weekly stocks at face value in original underlying currency (debt securities) and daily stocks at number (shares)
- Sectoral classification in the reporting forms are adopted to SNA classification
- Banks and Brokage Houses use following codes when reporting their own holdings
  - M1: if held by bank and custodian institution
  - M2: if sold under a repo agreement
  - M3: if provided (given) as a collateral
  - M4: if given (lent) under a lending agreement
  - M6: customers' portfolio

Reporting agent loses legal ownership but still holds the economic ownership

# Sectoral Classifications

Sectoral classification compiles with SNA

**exception:** money market funds & non-money market investment funds

## Issuers

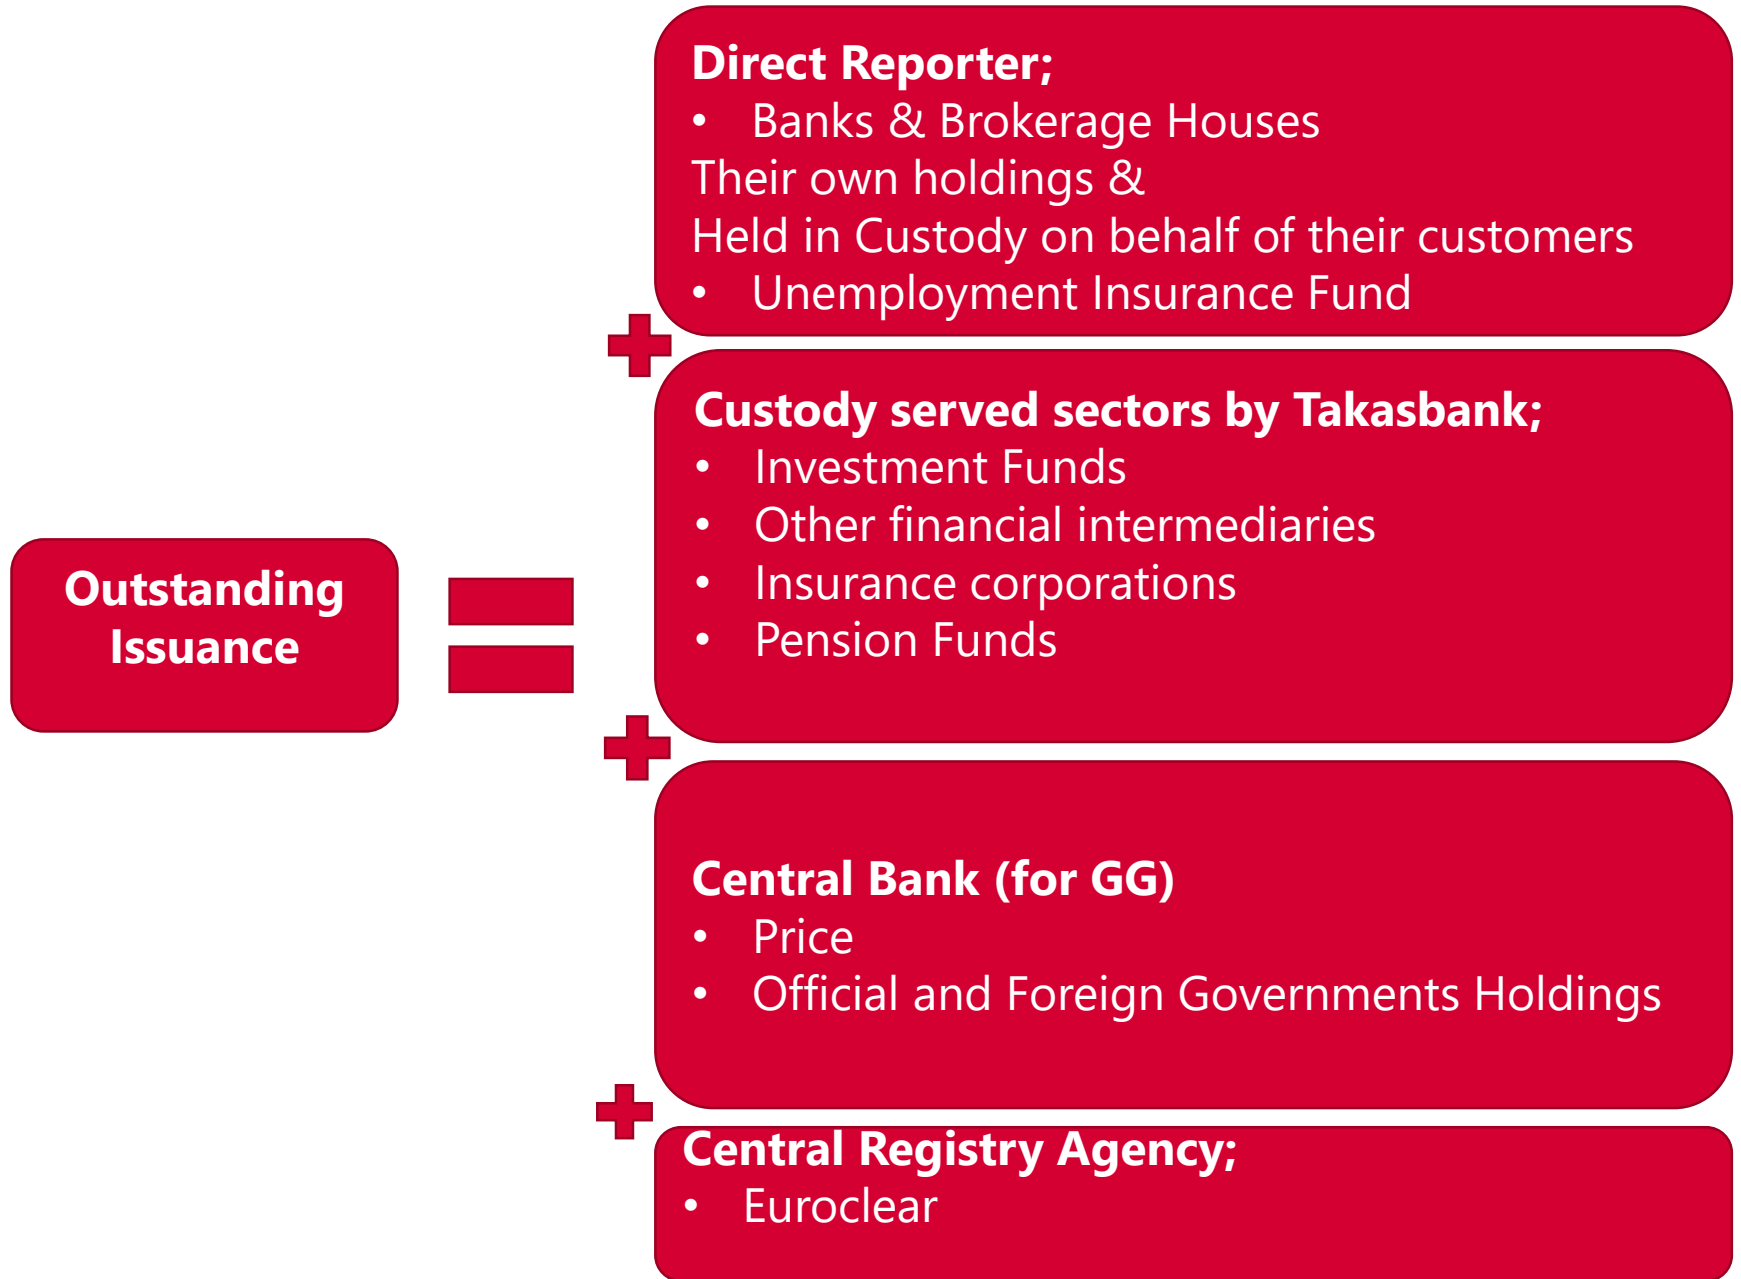

- General Government **(S.13)**
- Nonfinancial Corporations **(S.11)**
- Banks **(S.122)**
- Other Financial Intermediaries **(S.125)**
