

Strategic Vision of the Statistical Commission of the Organisation of Islamic Cooperation (OIC-StatCom) for 2030 and Programme of Action for 2021-2025

1 Introduction

Based on the Istanbul Declaration of the 2010 Meeting of the National Statistical Organisations (NSOs), the member countries of the Organisation of Islamic Cooperation (OIC) agreed to organise their regular meetings under the umbrella of OIC Statistical Commission (OIC-StatCom). The OIC-StatCom aims at bringing about a platform for exchanging experiences and best practices among the member countries to build effective statistical capacity at the OIC level. It was decided that the Statistical, Economic and Social Research and Training Centre (SESRIC) would act as the Secretariat of the Commission. As the current OIC-StatCom Strategic Vision Document¹ will expire by the end of 2020, the members of OIC-StatCom decided to establish a Working Group (WG) on the Development of New Strategic Vision of OIC-StatCom during the 7th Session of OIC-StatCom held on 3-4 May 2018 in Ankara, Turkey. The WG is composed of 2 co-chairs and 22 members as shown in Table 1. The WG members were identified based on the results of the preliminary questionnaire circulated by the OIC-StatCom Secretariat in August 2018 to the NSOs of OIC member countries.

Table 1. Members of the Working Group

Role in the Working Group	Countries / Institution
Co-Chairs	Malaysia and Iran
Members	Albania, Azerbaijan, Benin, Cameroon, Egypt, Gabon, Gambia, Indonesia, Iraq, Jordan, Mauritania, Morocco, Mozambique, Niger, Pakistan, Qatar, Saudi Arabia, Somalia, Sudan, Togo, Tunisia, and Turkey

Subsequent to the formation of the WG, SESRIC, in its capacity as the Secretariat of the OIC-StatCom, circulated a questionnaire² on the New Strategic Vision of OIC-StatCom 2030 in July 2019 to all national statistical offices (NSOs) of OIC member countries aiming to provide the necessary inputs for drafting the OIC-StatCom Strategic Vision 2030. As of 29 November 2019, 39 OIC member countries submitted their responses (69.6% response rate).

Table 2. Respondents by the OIC Official Regional Groups

OIC REGION	COUNTRIES
African Group (12)	Benin, Burkina Faso, Cote d'Ivoire, Gambia, Guinea, Guinea-Bissau, Mali, Mozambique, Niger, Sierra Leone, Togo, and Uganda
Arab Group (15)	Djibouti, Egypt, Iraq, Jordan, Kuwait, Libya, Morocco, Oman, Palestine, Qatar, Saudi Arabia, Somalia, Tunisia, UAE, and Yemen
Asian Group (12)	Azerbaijan, Bangladesh, Brunei, Indonesia, Iran, Kazakhstan, Malaysia, Maldives, Pakistan, Suriname, Turkey, and Uzbekistan

Strategic Vision of the Statistical Commission of the Organisation of Islamic Cooperation (OIC-StatCom) for 2030 and Programme of Action for 2021-2025

The Strategic Vision of the OIC-StatCom for 2030 has been prepared based on the responses received from the survey and the feedback received during the 8th Session of OIC-StatCom held on 23-25 October 2019.

The Strategic Vision Document acts as a reference document for the OIC-StatCom in formulating its Programme of Action for 2021-2025 and 2026-2030 to facilitate the statistical cooperation and collaboration endeavours and contribute to the efforts of the NSOs of OIC member countries towards addressing the challenges facing their national statistical systems (NSSs).

2 Challenges

The NSOs in the OIC member countries play a crucial role in providing statistical services including collecting, collating, compiling, processing, and disseminating official statistical information to meet the needs of their governments and other users concerning designing, implementing, monitoring and evaluating socio-economic development policies, plans and strategies. However, they encounter some challenges in carrying out their functions including:

1. Under- and delayed financing

Like any other public service in countries, the NSOs require financial resources to be able to perform the duties requested from their governments and other relevant stakeholders. However, the economic difficulties in some OIC member countries oblige them to underfinance their NSOs and even, the international donors; sometimes seen as a remedy for financing statistical operations, delay in honouring their commitments for funding. Both the underfinancing and the delayed financing of the NSOs of OIC member countries put them at risk of not meeting their national and/or international commitments.

2. Unaligned levels of statistical development

The capacities of OIC member countries vary broadly in producing high-quality statistical data. The challenges in accessing the financial resources also cause the NSOs not to receive the relevant statistical capacity development to enable their human resources to keep up with the most recent international standards. In result, the OIC member countries end up with unaligned statistical capacities and face risks in producing timely and high-quality official statistics.

3. Slower adoption of new technologies and statistical modernisation

In conjunction with the first two challenges, lack of financial resources and lack of human resources that can harness the power of new technologies and statistical modernisation may lead to delays at the NSOs in embracing new technologies and communication tools. As the data demand is dynamic and ever-changing, and trends and technology are never stagnant, the slower adoption of new technologies and architectural models by the NSOs result in more delays in modernising their structures and meeting the needs of data users.

4. Increasing competition from non-official statistics providers

The NSOs – as the elementary institutions of official statistics – may face significant competition in terms of their future role in statistical data production as providers of non-official statistical data emerge as alternative sources of information for data users in recent years. This competition

Strategic Vision of the Statistical Commission of the Organisation of Islamic Cooperation (OIC-StatCom) for 2030 and Programme of Action for 2021-2025

between the NSOs and non-official statistics providers may become to the detriment of the NSOs. Being in the private sector, non-official statistics providers are with more resources to employ/retain high-calibre human resources and use new technologies to be ahead of the NSOs in providing more timely data. Accordingly, the NSOs in some member countries may even face with the risk of becoming obsolete institutions in the not-so-distant future in the light of this emerging competition.

5. Lack of statistical literacy among data users

Statistical illiteracy is an obstacle that prevents data users from taking advantage of the full power of statistics. In this connection, statistical literacy should not only be restricted to the knowledge of basic statistical information but also should include the knowledge about the limitations of statistics and their use/misuse. Accordingly, the ability to comprehend statistics, and their production processes, is an essential aptitude for each data user. Poor statistical literacy at the society level can easily lead to misunderstandings, misperceptions, mistrust, and misgivings that may lead to non-optimal decision-making.

6. Insufficient communication between the NSOs and data users

Public agencies are established for the public benefit and need to communicate with their stakeholders to better learn about and respond to their needs. Unfortunately, unclear and outdated channels of communication hamper the effective engagement of these institutions with their relevant stakeholders. Moreover, the recent years have witnessed a major transformation by replacing ‘dissemination’ with ‘communication’ in the official statistics sector. Flagship statistical yearbooks alone are not sufficient for such purposes. Overlooking the fact that they are also responsible for communicating the statistical information and updating their relevant structures with latest forms and methods of communication, some NSOs may have delays in modernising their websites, developing an active cooperation with the media, and having a strong presence in the social networks. As an extension of the fifth challenge, inadequately communicated statistical information may also lead data users to the flawed deductions that substitute substandard data or their very own views may have an equivalent value as the official statistics have.

7. Inadequate coordination mechanisms within NSSs

The NSSs typically consist of the NSO and any other constituents that produce official statistics. An effective and efficient NSS that provides high-quality data for policy design and monitoring is a crucial component of good governance. However, lack of relevant legislation defining the constituents of inter-institutional coordination and their respective responsibilities, lack of a strong institution to act as the coordinator within the NSS, and lack of strategy formulation and implementation to sustain the inter-institutional coordination mechanism pose risks to the quality and flow of data for decision-making in some OIC member countries.

8. Difficulties in aligning NSSs with the regional/global statistical requirements

The NSSs exists primarily to satisfy the statistical information needs at the national level. Official statistics systems that have been shaped according to the national needs, however, sometimes limit the comparability among countries due to the differences in methodologies used, survey design, and conceptualisation of metadata. On the other hand, the need for comparability across countries has gained significance because the statistical indicators are made an inseparable part of regional/global

Strategic Vision of the Statistical Commission of the Organisation of Islamic Cooperation (OIC-StatCom) for 2030 and Programme of Action for 2021-2025

policies. Despite this development, some NSSs face serious resource and/or legislative challenges in transforming their structures to be able to produce what is required by the regional/global community.

9. Challenges in responding to data needs and demands during crisis times

Without any exception like other government agencies, NSOs face tremendous challenges during crisis times such as the COVID-19 pandemic. Data are more urgently needed than ever by policy makers to guide them in fighting these crises situations. However, when the need for high-quality and timely data is crucial during crises times, the NSOs have the risk of facing significant difficulties in performing their operations either due to restrictions imposed to counter the crisis situations (such as limiting face-to-face survey interviews as a consequence of physical distancing measures) or due to lack of appropriate infrastructure and relevant business continuity strategies.

10. Difficulties in assuring quality in official statistics

In some statistical settings, data must meet the criteria of relevancy, accuracy, timeliness, punctuality, accessibility and clarity, comparability, and coherency to be accepted as “high-quality”. Apart from the “statistical output” dimension, the dimensions of “institutional environment” and “statistical processes” should also be taken into consideration for assuring quality in official statistics. However, all challenges covered previously together with the potential political influences dominating the design, production, and communication of indicators introduce difficulties in assuring quality in the official statistical systems in some OIC member countries.

3 Vision

“Ensure Trustworthy and Responsive Statistical Data for All”

4 Mission

“Strengthen the Statistical Cooperation among the OIC Member Countries towards Better National Statistical Systems”

5 Values and Guiding Principles

The values that will guide the activities of OIC-StatCom and to which the OIC-StatCom is committed are:

- **Professionalism** implies *responsibility, competence and expert knowledge, innovativeness, effectiveness, efficiency, and having systematic approach.*
- **Integrity** means *dedication, consistency, discipline, openness, respect, confidentiality, accountability, responsiveness, and compliance.*
- **Togetherness** includes *cooperation, communication, solidarity, harmony, and synergy.*

Strategic Vision of the Statistical Commission of the Organisation of Islamic Cooperation (OIC-StatCom) for 2030 and Programme of Action for 2021-2025

The guiding principles of the OIC-StatCom is the *Fundamental Principles of Official Statistics* (United Nations Resolution 68/261 of 29 January 2014)³ and its relevant supplementing documents adopted by the United Nations Statistical Commission.

6 Overview of Strategic Objectives

The Strategic Vision of the OIC-StatCom for 2030 includes 5 strategic areas, each followed by strategic objectives. Each strategic objective is provided with the related items of the Programme of Action for the period 2021 and 2025.

Strategic Area 1: Coordination of Statistical Cooperation and Collaboration

Many NSOs in the OIC region already have the inter-agency and international collaboration and coordination but need to further strengthen the cooperation among data providers and data users towards providing relevant, accurate, and timely statistics obtained in a cost-effective manner. Commitment and strong cooperation among the NSOs in OIC member countries will address the major challenges and create statistical system more robust and effective as a whole.

Objective 1.1: Strengthen the coordination role of NSOs within the NSSs.

Objective 1.2: Advance the cooperation and collaboration among OIC-StatCom and other national, regional, and international stakeholders active in the production of data and statistics.

Strategic Area 2: Statistical Capacity Development

The development agenda at the regional and global levels explicitly call for enhancing capacity development to achieve the scope and intent of these agenda. In this respect, statistical capacity development is important for all countries, even more so for OIC member countries. Indeed, some of the global development agenda indicators require strengthening of capacity building efforts to produce the necessary data.

Objective 2.1: Ensure that statistical needs and capacities of NSSs of OIC member countries are identified based on the international frameworks.

Objective 2.2: Implement statistical capacity development activities based on the OIC-level and global development agenda.

Strategic Area 3: Statistical Modernisation and Innovation

The development agenda at the global and regional level further increases the demand on countries to produce and make available faster and cheaper high-quality data, which requires the implementation of new solutions in a context of decreasing funding for constituents of NSSs. Among others, these include aligning statistical legislation with the requirements of these development agenda, using alternative data sources and expanding the base for administrative data, implementation of statistical architectural models, realising the digital transformation, developing the open data culture, and increasing statistical literacy.

³ <https://unstats.un.org/unsd/dnss/gp/fundprinciples.aspx>

Strategic Vision of the Statistical Commission of the Organisation of Islamic Cooperation (OIC-StatCom) for 2030 and Programme of Action for 2021-2025

Objective 3.1: Modernise governance and institutional frameworks to allow NSSs to meet the demands and opportunities of constantly evolving data ecosystems.

Objective 3.2: Facilitate the application of new statistical architectural frameworks to improve statistical production and dissemination processes.

Strategic Area 4: Common Statistical Standards and Classifications

The implementation of most recent international concepts, definitions, methodologies, standards, classifications, and statistical frameworks has an impact on the statistical management, production, and dissemination processes. Additionally, such implementation can inspire the development of methodologies for the production of indicators specific to the OIC member countries.

Objective 4.1: Promote harmonisation of concepts, classifications and methodologies used in performing statistical activities in OIC member countries to promote consistency in statistical systems.

Objective 4.2: Strive to produce common methodologies for selected statistical indicators specific to OIC member countries.

Strategic Area 5: Statistical Quality Improvement

Statistical quality is most often defined as 'fitness for use' by end users. Quality, therefore, depends on data uses and users. Analysis of statistical quality permits the identification of target areas for capacity building.

Objective 5.1: Improve the production of high-quality, accessible, timely, reliable and disaggregated data by all characteristics relevant in national contexts in line with OIC-level and international development agenda.

Objective 5.2: Increase the competencies of OIC member countries in the use of administrative registries towards high-quality statistics instrumental in the monitoring of OIC-level and international development agenda.

Strategic Vision of the Statistical Commission of the Organisation of Islamic Cooperation (OIC-StatCom) for 2030 and Programme of Action for 2021-2025
