History- TurkStat

Important Dates...

- Defterhane, 1389
- Central Statistical Council at Prime Ministry of the Empire, 1891
- The Central Statistical Department, 1926
- The General Directorate of Statistics (GDS), 1930
- The State Institute of Statistics (SIS), 1962
- Turkish Statistical Institute (TurkStat), 2005
Transition to Program Based Statistical Implementation Period (OSP, National Data Release Calendar etc.)

Ensures the Scientific and Technical Independence

Identifies the issues on data confidentiality

Includes the data quality related issues

Establishes the Statistical Council

Reorganizes the TurkStat
Official Statistics Programme

- 5 year programme since 2007
- Based on Turkish Statistical Law
- Establishes a framework for official statistics.
- States the objectives, coverage, methods, frequency, work plan and dissemination principles.
- Defines the duties of the institutions and organizations regarding the compilation, evaluation and publication of data.
CENSUS HISTORY
Data Sources for Population Statistics

1- Population Censuses (1927-2000)

2- Address Based Population Registration System (2007 – 2019 - …)

3- 2011 Population and Housing Census

4- 2021 Population and Housing Census

Population Characteristics

Database
Census History in Turkey

- The first census in 1927,
- The second census in 1935,
- Every five years between 1935-1990,
- The last traditional census in 2000

Totally 14 traditional population censuses

Method

- Traditional census method (face to face interview),
- Standard questionnaire (paper),
- «De facto» population definition,
- One day application with national curfew
  (no permission to go out)
14 traditional population censuses (1927-2000)

- One-day full enumeration with national curfew
- Paper based questionnaire (ICR method in 2000 Census)
- No information on usual residence (de jure)
- Need of a large number of staff
- High cost
- Overcounting
- Long duration of data processing (around 3.5 years)
- Population statistics are available within 5-10 year interval
Target

Establishing Address Based Population Registration System and changing the census methodology from traditional to register based.
Address Based Population Registration System (ABPRS)
Legal Base

2. The regulation related to Address and Numbering Study. (Prepared in accordance with Civil Registration Services Law)
3. The Turkish Statistical Law No. 5429 (related articles on field application and data confidentiality).

- Civil Registration Services Law charged;
  - TurkStat for establishing the ABPRS.
  - Ministry of Interior for maintaining and updating the system.
Why ABPRS?

- Saving public resources
- Standardization of addresses
- Carrying out the public services more effectively
- Successful plans and programs in national and regional level
- Updated statistics on population

Purpose of the establishment of Address Based Population Registration System (ABPRS)

- To set up a central address database including all of the addresses in the country.

- To obtain a standardized numbering and signboarding for all over the country.

- To define an address standard and prevent different descriptions of an address.
The Central Civil Registration System (MERNIS)

- MERNIS is a centrally administered system.
- Any changes in civil status (births, deaths, marriages etc.) are registered electronically in real time over a network by the civil registration offices.
- MERNIS is based on family ledgers.
- No information was available on place of usual residence (before ABPRS).
- Maintenance of the system obtained by the Ministry of Interior, General Directorate of Civil Registration and Citizenship (GDCRC).
- MERNIS has become the backbone of the e-Government infrastructure in Turkey.
Background of ABPRS

**TR Identity Number**

- Unique ID number for Turkish Citizens available since 2001.
- The unique ID number is comprised of 11 digits which do not contain personal information.
- The TR identity number provides:
  - Fast and efficient identification
  - Register all civil status events from the moment of birth
  - Provide fast and efficient services to the users of public services
  - Provide connection between addresses and personal information.
Address Components Standard

- Address components are geographical elements used for the description of an address.
- Address Components Standard was published by Turkish Standards Institute (with the code TSTEN14142-1) in 2006.
- According to the standard, the address must contain:
  - Province, district, municipality, town and village names.
  - Quarter, square, boulevard, road and street names.
  - Building and indoor numbers.
  - Address codes
  - Post codes
General Structure of the System Established

- **MERNIS** (Turkish Citizens)
- **National Address Database** (NAD)
- **Foreigners living in Turkey**
- **ABPRS**
- **Turkish Citizens living in abroad**

MATCHING the information in MERNIS and addresses in the NAD by using the Turkish Republic identification numbers

MATCHING foreign citizens and addresses in the NAD by using passport numbers
Personal information was matched with address information by using Identification Numbers and address codes.
The related regulation defined:

- How the buildings should be numbered,
- The rules to determine the name and the number of avenues, streets or group of buildings,
- The direction of streets,
- Content and structure of signboards,
- Where the signboards will be put,
- How to number the interior doors of the buildings,
- How to control the numbering studies.
Establishment of the NAD

- Field work were carried out
  - by the municipalities in the localities having municipal organizations and
  - by the Special Provincial Administrations in the villages.
- Infrastructural studies was carried out by TurkStat.
- Data entered by local organizations.
- Around 40 million addresses were entered to the system with unique address codes.
Establishment of the ABPRS

Coverage of the study:
- Persons living in dwellings or other housing units,
- Persons residing in institutional places,
- Nomads,
- Foreigners living in Turkey.

- Turkish Citizens residing abroad were not included.
Updating the System

ABPRS

NAD

MERNIS

- Construction Forms (new buildings)
- Burned and Demolished Buildings
- Changes of address components
- Birth, death, marriage, divorce
- Changes of usual residence address
- Controlling the notification of the changes
- Use for the services
- Use of the agencies
- Border changes of a settlement
- Constructing new residential areas
- Changes of administrative units
- Increasing the consciousness

Demographic Statistics Department
Population and Migration Statistics Group
Updating the System

- Persons are under the obligation of notifying changes of usual residence address. A person can have only one address of usual residence. But other addresses such as summer houses, winter houses, second or third houses may be entered to the system (without obligation).

- Persons are not under the obligation of notifying changes occurring in address components. Such changes should be made by municipalities and special provincial administrations.

- Address change notifications should be made within 20 working days to the civil registration offices (or agencies providing address-based services) by the persons with using a simple declaration form.
Statistics produced from ABPRS

Statistics produced annually (since 31 December 2007):

• Population size by localities
• Age, sex
• Literacy and completed level of education
• Nationality
• Marital status
• Place of civil registration
• Mean household size
• Internal migration (2009)
• Place of birth (2014)
• Type of households (2016)
• Immigration and emigration (2018)

ABPRS is also base for:
• Life tables
• Population projections

Average Household Size (3.30)
2011 POPULATION AND HOUSING CENSUS (PHC)
After 14 traditional censuses, 2011 PHC was conducted with “combined” method.

- %20: Address Based Population Registration System (ABPRS) and National Education Statistics Database (NESD)
- %80: Sample survey

In 2011 PHC, registers were also used for:
- Address frame (National Address Database)
- To check the accuracy (Social Security Records, Unemployment Agency Records, Building Permits)
- Corrections/Imputations
2011 PHC

- De jure population definition (instead of de facto)
- 3 months field application (instead of one-day)
- 12% sample rate (enumeration area)
- Full enumeration in institutional places
- In total: 2.4 million households and 9 m. individuals
- Face to face interview
  - 40% PAPI
  - 60% CAPI
2011 PHC

- Use of registers for census for the first time (20% of the variables)
- Difficulty in hiring and training of a large group of field staff for a short term work
- Relatively high cost
- Not being able to produce estimations for small geographic levels based on sample survey
- Lack of interest and support of municipalities
- Rising concern about confidentiality and privacy

2021 PHC
Population and Housing Census Methodology

Changing the system from combined method to register-based census
Driving Forces

- Negative features of the censuses with field operation
- Completion of the Central Civil Registration System (MERNIS) including unique ID numbers: 2002
- Setting up the National Address Database (NAD): 2006
- Establishment of the Address Based Population Registration System (PR/ABPRS): 2007
- Creating the National Education Statistics Database (NESD): 2008
Driving Forces

- Producing annual population statistics according to PR: 12 years, 2007-2018.
- Utilizing administrative registers for the first time for census purposes: 2011
- Setting up the Institutional Living Quarters Address Database: 2012
- Transforming the National Address Database to Spatial Address Registration System (SARS) by adding coordinate information to addresses: 2012-2020
PHC Preperations

- Steering Committee (SC) was established (June 2018):
  - Consists of a vice president and 5 related heads of departments of TurkStat
  - To manage and coordinate all processes of 2021 PHC
  - To decide the working groups
  - To decide the registers to be used
  - To determine the needs (budget, IT infrastructure)
- Working groups on «Labor Force Statistics» and «Quality» were established
Registers Needed

- Population ✓
  (demography, migration, household/family)
- Address ✓
- Education ✓
- Disability
- Employment and Unemployment
- Building and Dwelling

2021 PHC Pilot Study

1st Pilot Study (2019)

2nd Pilot Study (2020)

3rd Pilot Study (2021)

Main Study 2021 PHC (2022)
Population Characteristics Database (PCDB) provides integrated information on persons such as birth, nationality, disability, education, employment status, income, property, migration, family structure, residential building and housing characteristics. With the Population Characteristics Database, it is aimed to produce high quality, low cost, sustainable and comprehensive statistics for PHCs and other data users. Population Characteristics Database is created by being integrated social security registers, unemployment registers, tradesman registers, active student registers, income-tax registers, disabled registers, agricultural registers and other registers.
Data Integration

Social Security Register
contains the insured's earnings, premium amount, premium payment days, etc. records

Agricultural Register
contains agricultural activities of persons

Income and Tax Register
contains the Annual Income Tax Return and earnings records

Employment and Unemployment Register
contains Turkish Employment Agency’s job seekers records

Disabled Register
contains type of disability and rate of disability

Social Assistance Register
contains disabled pension, widow’s pension, orphan’s pension and other social assistance

Education and Exams Register
contains active and passive students records and higher education exams and exams for job

Retirement Register
contains retired records

Population Characteristics Database

Turkish Republic ID Number
Registers Situation for the PCDB?

19 registers needed
16 registers obtained
3 registers not obtained yet
PCDB for 2021 PHC

77% Registers

23% Modelling
Challenges of Administrative Data

- Lack of Metadata
- Different Classification by Dataholders
- Missing Value in Registers
- Differences of Definitions
- Reference Date
- Multiple Record – Deduplication – Data Loss
- IT Infrastructure
Advantages of Administrative Data

- Unique Key (TR ID Number / Address ID Code)
- Dataholders willing to share data
PCDB beyond 2021 PHC

Turkish Republic ID Number

- Environment and Energy
- Transportation and Communication
- Justice
- Agriculture
- Health
- Trade and Services
- Other…
